Simoco Xd Voice Recorder

The Simoco Xd Voice Recorder brings reliable recording and playback for Simoco DMR radio systems.

Resourcefulness

The Simoco Xd Voice Recorder is a powerful software application, which enables recording and playback of all Simoco Xd calls from a standard specification PC. No longer is there a need to playback a sequential stream of all recordings for various tasks, as the voice recorder provides a system for recording, archiving and retrieving various recordings, which is defined by the user.

Information at your fingertips

The Simoco Xd Voice Recorder gives the user the power to filter playback information on demand. Recordings can be filtered by date, time and called or calling party. It is possible to filter calls so that only ones on a particular Simoco Xd Base Station or defined group of base station are displayed in the list. The ability to locate essential information quickly and conveniently enables the fast and efficient completion of operational tasks and investigations.

Benefits

- Staff protection through automatic recording of every voice call made by the radio system
- Full control of recordings enabling the operator to search by date, time, called party or calling party
- IP connected distributed architecture for ease of deployment and high levels of resilience

Features

- Automatic Archiving with E-mail Status Reporting
- Parameter Based Report Filtering
- PC based runs on Windows 10 Professional
- Scalable Storage Capability
- IP connection to Simoco Xd system
- Analogue, DMR Tier II and Tier III Operation

Simoco Xd Voice Recorder

IP Flexibility

Each voice recorder server supports up to 100 channels. Simoco Xd IP flexibility enables the addition of any number of servers anywhere in your network. Each server in the network acts as a component of a single distributed network system. Distributed architecture enables almost limitless expansion in addition to resilience and fallback solutions – just like any other IT server solution. All information in all servers is available to any user at the click of a mouse.
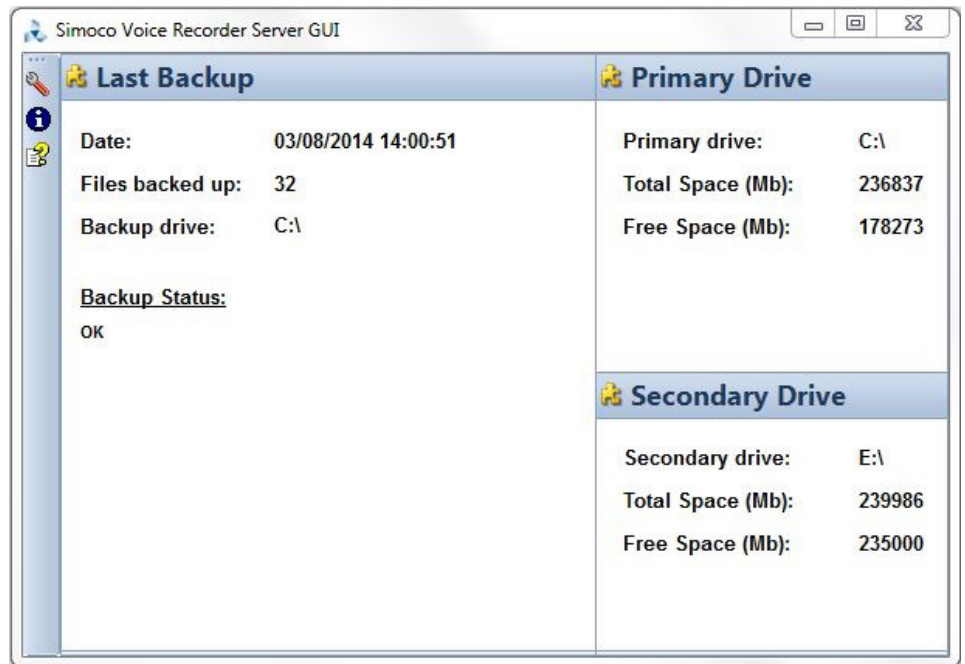

Functionality

The Simoco Xd Voice Recorder offers a clear and intuitive interface for managing recordings. System administrators can schedule the archiving of recordings and have reports automatically e-mailed to them at the conclusion of each back up. Each server can be linked to two separate backup drives providing an overflow facility if the primary backup drive becomes full or its media is removed for physical archiving. Recording capacity can be increased as the radio system expands by simply by upgrading the server licence.

Operating Systems
• Windows 10 Professional 64 bit version

Minimum PC Specifications
• Processor: 2 GHz 64 bit
• HDD Space: 500GB
• RAM: 4GB DDR2
• Other: Ethernet Port
